

FAQ - Bee Removal

Why should I use Allstate Pest Control?

We are committed to providing great service that protects your home and business, innovatively and creatively; producing safer, more efficient and effective treatment methods against the infestation of termites and unwanted pests. We believe in no risk approach, which is why you can expect more with Allstate. Our customers, employees and the health of the environment are our primary concern when performing your services.

Do you attend emergency calls?

Due to beehives and swarms being a serious health risk to those allergic to their sting we offer 24 hour 7-day service ensuring treatment is performed fast and efficiently.

How do you get rid of the bees?

Our service will depend on the spot where the bees have created a hive. When we can we physically remove the hive by bagging the swarm and relocating. Unfortunately in most cases bees create a hive in cavity like a wall or chimney and we are unable to remove and relocate in this situation we apply a control dust into the space eliminating the colony.

What type of treatment do you apply?

The treatment we apply for bees is a safe and approved control dust that is lightly applied to the cavity. This product kills on contact and also repels for on-going protection to the area.

Is the treatment safe for my family and pets?

Our beehive removal and control services are designed to be as safe as possible and our technicians are trained to eliminate all risks before performing the service. This will include inspecting internals of your home were required and sealing any vents and holes to ensure no bees enter the home during or after treatments.

Are your treatments guaranteed?

Yes. Our beehive removal and control services are backed by industry leading 6 Month Re-Treatment Warranty to the area treated.

Can bees come back at a later date and infest the area again?

Yes. We highly recommend that you proof off the area bees infested as soon as possible but at the very least before spring the next year. This is because the hive that is created by the bees is highly attractive to new swarms. We offer proofing services that includes installing fly screen to vents, weep-hole covers and sealing cracks and crevices.

Do you abide by Government regulations?

Yes. We are a fully licensed pest control company and all of our technicians and senior management staff are also licensed pest controllers. We are also fully insured and have undertaken annual ISO 9001 Quality Management Audits to ensure you receive the best service possible.
